After months of planning, (and many restless nights for me) Southern Pacific 4-6-2 steam locomotive 2479 and the San Jose Roundhouse turntable successfully moved to Niles Canyon Railway property the week of August 22.

Following both boards of the PLA and the California Trolley and Railroad Corporation (CTRC) agreeing to the transfer of the historic assets, I developed a proposal with associated costs for the assets’ owner, Santa Clara County. All of the items, with one exception, had arrived at the County fairgrounds via truck. The one exception, locomotive 2479 was delivered by rail in September 1958. Immediately afterwards, Southern Pacific removed the connecting tracks effectively landlocking the locomotive.

The PLA steam team and CTRC volunteers met several times to discuss

### Volunteer Report

Volunteer Coordinator: Ed Best

The people listed below reported over 2,900 volunteer hours for the month of August. Please continue to report your volunteer hours to me by e-mail at volunteers@ncry.org. Train Crew hours are collected directly from the log sheets and meeting attendance by teleconference is reported to me by the Membership Secretary.

**Administration**
- Henry Baum

**Volunteer Report**

October 2022
Pacific Locomotive Association, Inc.
New Members:
John Blaine; Constantine Chan; Jackie Chan; Xiumei (Joyce) Chan; Kavita Choudhry; David Dietz; Thomas Hagen; Chris Hebert; Greg Hebert; Kathy Hebert; Deanne Knowles; Malcolm McNeil; Sandra McNeil; Ken Middlebrook; Larry Murchison; Arthur Randall; Shane Rivera; Perry Servedio; Evan Timmons; Karen Wade; Miles N. Wade; Miles Wade; Dorcas Yow; Jesse Yow.

If you see any of these new members, please give them a big welcome and show them around.

The ticket request forms for the 2022 TOL Volunteer Train have been sent out to those volunteers who had 30 or more volunteer hours with a maximum of six tickets. They are already being returned. As of this writing we have 83 requests for Saturday’s train and 103 requests for Sunday’s train. I am using FareHarbor to track the ticket requests that way I can print a manifest and also send out emails to those members with updates. When I first set it up, I copied and pasted from the regular TOL trains so there were some errors. I believe that I have corrected them at this time. As soon as we get the tickets back from the printer, I will be mailing them out. Tickets will be in an envelope inside a larger envelope. This is the same system we use for issuing tickets at the ticket window.

The Volunteer Slots are up on the web site so sign up early in order to lock in the dates you want. Don’t hesitate, sign up now.

We just received word that David Ernest has passed. As many of you know David was a long-time member. He held many positions around the railroad including Membership Secretary, Vice-President and for many years was the Gift Shop Manager. When the Gift Shop was re-organized, I talked David into coming out of retirement and help set up the present Gift Shop as it is today.

If you have questions, you can contact me either by email membership@ncry.org or call me on my cell 510-508-0503.

Rich Alexander

President’s Message

Henry is under the weather, his column will return next month.

Rich Alexander

Reduce Your Taxable IRA Distribution

If you are over age 70½ you can contribute to the PLA directly from your IRA. Your Qualified Charitable Distributions may reduce your taxable income from Required Minimum Distributions (RMDs). Contact your IRA administrator, they can easily set this up for you. Questions? Contact Pat Stratton, Treasurer, 650-888-8619. Email: treasurer@ncry.org.

NILES CANYON RAILWAY

BRAKEMEN CLASS

WILL BE HELD

NOVEMBER 5 & 6

8:00 AM TO 4:00 PM

AT THE WHITE HOUSE - BRIGHTSIDE

WITH HANDS ON TRAINING FOLLOWING DAY (NOV. 6)

MEMBERS MUST BE ABLE TO PERFORM BRAKEMAN DUTIES

MATERIAL FOR CLASS WILL BE PROVIDED

LUNCH WILL BE PROVIDED

Contact: Dexter Day plancrygm@gmail.com
Train of Lights Volunteers Needed

As you’re reading this October Club Car, most of the tickets for this year’s Train of Lights are sold out because tickets went on sale on October 1st. Our exterior and interior decorating groups have been hard at work decorating the train cars for several weeks now and the important thing needed now is volunteers to sign up for the different positions on the train or on the ground each of the nights we are running this season. If you can help, please sign up online. We have our first public trains on Friday, November 18th so please sign up soon.

Go to ncry.org, then click on Members’ Website under About, and then click on Volunteer Opportunities under Volunteer. You will see 2 pages of volunteer spots to help this year. We need caboose hosts, dome and parlor car hosts, snack bar workers, and some new spots called cocoa captain, crew captain, and dome and parlor cars captains. These were made so we know there will be someone who knows what to do to make the cocoa and serve the snack bars and the first class cars. They will be working both trains to have continuity between the two trains each night. The dome and parlor car crews (helping the captains) can work either the 4:30 or the 7:30 trains, but if you want to work both trains then you need to sign up for both the 4:30 crew and 7:30 crew. We also need parking lot workers at both locations. And if you can only do something at home, you can sign up for making food to serve our volunteers each night we run trains. When the trains go empty from Fremont to Sunol from 6:00 to 7:00pm is when the train crews eat. The food is served in crock pots on the train and the crews really appreciate a hot meal on the winter nights we operate.

Thank you for your volunteer heart!

donna alexander

Wanted – A Pallet Jack

The mechanical department is looking for a working pallet jack that we can use around the shop. We are looking to organize parts for the SP #1744 (and in the near future SP #2479 parts as well) and need a replacement pallet jack to get the work completed. If you have a pallet jack that can be donated or obtained for minimal cost, please call Alan Siegwarth at (408) 515-4602 to discuss. Thanks for supporting the Pacific Locomotive Association.
Along the Right of Way

Autumn falls on the Niles Canyon with the beginning of October and all of us at the PLA are excited with the prospects of the coming season. This month will see the wrap-up of the regular operating season, and, with our usual flare, we will steam into the holiday months. We hosted a couple charters last month that were classic, and the debut of our Valley subdivision came to a close at the end of September and by all accounts the effort was a great success. The car department continues to furiously work on finishing repairs and repainting and on the ROW lots of work has been done to tame the trees, prepare room for our donated equipment and ensure all is ready for Train of Lights.

Around Brightside, work continues on the windows for the 315 coach, the paint job on the Park, and general clean up and organization in the yard. We really are in a push to get things done for decorating the Train of Lights and for receiving our donations from Santa Clara. While the regular car department folks have shifted to exterior decorations, we have been pulling volunteers from all other departments to lend a hand with finishing restorations. To receive the SP 2479 steam locomotive, MOW cleared a large area in the Milepost 37.2 (Johnston Curve) for two giant cranes and all the trucks carrying the engine parts, and transported a bunch of support equipment for the big move. Along with the engine to Johnston curve, the Tender was unloaded at Brightside driveway and the turntable bridge (set on a flat car at Johnston) had to be unloaded at Niles Wye. That was a huge couple of days, and it needs a tale all its own. Even with all that going on, we still managed to extend the finished track out East, clear out a couple of camps that popped up too close to the track, have our fire extinguishers and backflow preventers serviced, get our signals inspected, battle graffiti at Niles station and conduct regular operations through the canyon and the M200 going East. Let me just say it was a busy month.

Niles Canyon Railway hosted an event for the Southern Pacific Historical Society as a side trip to their annual convention. The operations department put together a special all SP consist for a tour of the canyon pulled by a double-head Black Widow MU and the commissary department set an impressive buffet lunch. About 80 members came to Brightside for a tour and enjoyed a sumptuous meal served under a tented pavilion next to Blake’s Palace (our yard office). We handed out official NCRY hardhats as souvenirs and we received great reviews and many thanks for the event. Thanks to all who worked so hard to put this on (you know who you are, and you
are too many to mention), these kinds of events give us a great reputation in the rail preservation community.

Another massive effort undertaken by the PLA came as a result of last month’s Sunol Citizens Advisory Committee meeting. This is a gathering of towns people and local government officials (Public Works, Calfire, County Sheriff and Supervisors Office, etc.) where concerns that affect Sunol are discussed, and grievances can be aired. At this meeting, an area near the Post Office was identified as a potential fire hazard due to accumulation of dead wood and leaf matter. Locals urged the county to clear up situation and after a study of aerial maps, determined it is indeed their property. The twist in the solution is that the area falls under the PLA lease as part of the Depot Garden and according to our agreement we are responsible for vegetation management. It is imperative that we be proactive about fire danger, which is why we constantly trim trees away from the track and the county sprays for weeds twice a year. After assessing the scope of work, it was decided we needed professional help. So, Terry’s Tree Service (a local Pleasanton business) was called in and they mustered an army of tree climbers and equipment to do battle with the giant eucalyptus and other trees. After two days work and substantial cost the area is now safe and, frankly, quite beautiful. The “Friends of the Depot Garden” (local volunteers who maintain the parklike atmosphere in the garden) have pledged to adopt the area as their own and can now move forward with their plans to use this section of Sinbad creek as an interpretive demonstration area for creek preservation. With this work, we have fulfilled our agreement to the county, reduced the danger of fire and made great stride in community good will. Well done us.

A real shining experience for me last month was a charter for the M-200. The Family of long-time member Richard Bowman reserved the railbus to celebrate a memorial birthday for him. The plan was to take a two-hour sunset cruise through the canyon with a buffet of snacks and champagne to celebrate with family aboard the Skunk he loved so much. Dick and his brother Dennis loved to volunteer in the canyon, and he dearly loved to drive the one-of-a-kind motorcar. Four generations of the family came from across California to board at Sunol. Our crew, Jorg Linke (Conductor), Ed Best (Brakeman) and I (Motorman) set up a banquet table in the cargo area at the rear and the guest of honor rode the motor housing with his favorite railroad hat perched on the urn. While this may sound strange to some, I have never seen a happier celebration of life, with stories of his and other family members experiences being joyfully bantered around the cabin. The trip included a photo run-by at the stairway-to-the-stars, a sunset champagne toast on the Farwell Bridge, and a grand buffet complete with birthday cake. At the conclusion of the trip, the reunion of relatives lingered on the platform continuing their glad time as we slowly rolled westward into the twilight. We all looked at each other and agreed that was a fine charter, and for me it was one of the little heart-warming moments you can only get when you give of yourself for the benefit of others.

Stephen Barkkarie
options. Included early on in these discussions was Robert Franzen of Steam Services of America. Robert had previously done contractual work on both the 2479 and PLA locomotives, thereby being a known entity to both organizations. Franzen would oversee the physical move.

At the minimum, the locomotive would leave the fairgrounds via truck due to its landlocked status. Years ago, sister Southern Pacific steam locomotive #2467 left Harrison Park to a nearby siding via a house moving company, a beneficial process since the locomotive moved intact. Sadly, this would not work for 2479 largely because of the lack of nearby sidings.

The locomotive would travel the 30-mile distance via trucks...LARGE trucks requiring equally large cranes at both ends of the move. Bridge restrictions along the route required separating the boiler off the chassis to stay within height and weight limitations.

With a plan, I was able to secure costs from Renn Transportation and Peninsula Crane & Rigging, local firms who have previously assisted with prior PLA equipment moves. In June 2021, the Santa Clara County Board of Supervisors approved my proposal for both the funding and ownership transfer of the assets. Without this support, the locomotive and roundhouse components would have stayed at the fairgrounds.

For the past 18 months, the small CTRC volunteer crew prepped the locomotive. CTRC has actively worked on the locomotive for over 30 years. Separating the boiler, ironically, would involve removing parts volunteers had recently installed in their restoration effort. A critical task was removal of the 42 fitted bolts connecting the smokebox to the cylinder saddle.

On Monday, August 22, trucks, cranes and crews descended on CTRC’s compound at the fairgrounds. First off was the lifting of the boiler as planned. Next was the chassis.

The actual weight of the chassis was unknown. Highway transportation to Sunol had a 165,000 pound limit. Several components were removed including the main rods, pistons and pilot. The lead truck would move separate. With all these preparations, the remaining weight estimate ranged from 132k to 165k pounds. If additional items were to be removed, the disassembly and reassembly process would be complex – the reasoning behind my restless nights. Furthermore, this additional work would be expensive due to the standby hourly costs of trucks and cranes. With both cranes lifting, an actual weight was determined, 132,000 pounds. Whew.

On Tuesday, August 23, placement of the locomotive onto NCRy rails occurred near Bonita. Weight limitation on the Hwy 84 bridge in Sunol restricted against trucking directly to Brightside. Once again, two cranes reassembled the locomotive with temporary bolts...
securing the boiler to the frame. Robert Franzen and his crew reinstalled the driver journal pads prior to the four-mile tow by SP #1195. The locomotive was an appropriate choice since a similar diesel locomotive had positioned 2479 into the fairgrounds 64 years ago.

It was a surreal moment as the 2479 rolled past the Sunol Depot. For 40 years, CTRC volunteers had dreamed about returning 2479 to active rails. To see her 73” driving wheels freely turning with no issues is a testament of the volunteer hours spent restoring her at the fairgrounds. Sadly, many of those volunteers did not live long enough to embrace the moment.

The trucks and only one crane returned to the fairgrounds on Wednesday, August 24 to load the tender and turntable with unloading on the following day. The tender was placed on rails at the Brightside driveway; however, the turntable required nearly the full length of the NCRy for its delivery to Niles.

The turntable could not be trucked directly to Niles due to the 110 foot length of the truck/trailer combination. As a result, the turntable was loaded onto PLA’s heavy-duty flat car at the same location where 2479 was unloaded two days before. While the crane relocated to Niles, the turntable travelled through the canyon led by SP #1195. A slight hiccup occurred when the crane experienced difficulty in accessing the Niles site. Like the locomotive and tender, the turntable was delivered, as planned.

Though not as logistically complex, there are more items that will arrive from the Santa Clara County Fairgrounds over the next two years. These newly received historical assets will play roles in the future of the Niles Canyon Railway.

Ken Middlebrook

Photos by Ken Middlebrook
This tale begins way back. It is 1865 and the railroad is being built in Alameda Canyon (Niles Canyon) by the Jerome Cox gang which was comprised of 600 workers mainly of Chinese builders. Along with being good at developing a roadbed for the railroad, they were good at building stone bridge piers, retaining walls and culverts. One such bridge that the piers were built for was in the Amador Valley West of Pleasanton. This is where this tale begins on the Arroyo De La Laguna Bridge.

It is 1866, and the Chinese labor are hard at work building what will be the biggest bridge built for this portion of the railroad which crosses the Arroyo De La Laguna creek. The Cox gang are building several large coursed sandstone piers which were some of the best built for that time. All these heavy piers might seem like overkill for the Howe Truss Bridge, which was wood but deemed “light, strong and elegant as a work of art”. In 1867, this new bridge was finished and would stand and stay as built until 1899. At that time the original bridge was replaced by a Pony/Riveted Through Plate Girder Bridges and two new piers were installed for the new bridge. The first Howe Truss through Skew span Bridge stayed in use for 32 years. The Pony/Riveted Through Plate Girder Bridge is now 134 years old and still has trains running across it and looks the same as the year it was built, add a little rust for age.

Through the years, I am sure there has been upgrades done on the bridges, but don’t have any written work orders to show any minor work that was done. This is really amazing that nothing drastic has happened to this bridge since it sits on the Calaveras Fault which is a finger off the San Andreas Fault. The Arroyo De La Laguna Bridge took the first noticeable damage during an earthquake that took place in this region many years ago. Looking down the East side of the bridge, you can see where the earthquake moved and miss aligned the second span so it is a little out of alignment with the other span against it. Although noticeable, it was deemed that the bridge was safe to stay in service. The railroad realigned the track on the bridge which
still provides proper strength and clearance for trains to pass over it and signed it off good to use and we run across these bridges today. There most likely have been other movement of the bridge over the past years, but have been corrected or not noticeable by the NCRY. Then in 2018, within a drought that has taken place for the past year, something happened. It could have been an earthquake in the region and due to drought and low water table, an underwater cavern could have given way. Whatever the cause was, the first pier of the Arroyo De La Laguna Bridge sank 6 inches. At least the bridge pier did us a favor, it settled straight down.

The shock of seeing it for the first time was something you were not expecting doing a M200 East end inspection trip. After inspecting the bridge as it sat, the M200 proceeded slowly and ran across the sunken bridge and continued its way East.

At least it was not the Farwell or Dresser Bridge that we use on our regular weekend operation from Sunol to Niles, but now we needed to come up with a plan on how we were going to repair the damage and at what cost to get the Bridge back up to operating limits. It was a sure thing we were not going to be able to do the repair with anything that we had laying around in the yard or in the shop. Also, to get it signed off, it needed to be done by professional Bridge Contractors.

The BOD put out a bid for a contractor to complete the repair job on the bridge. The successful bidder to complete the repair of the bridge was Koppers Railroad Structures. Doug Vanderlee was the PLA overseer while the bridge project was being done. Although the project looked like a straightforward job, you are still dealing with a large, heavy object. For instance: from the West abutment to pier number 1 was 866 ft. 3 in. and at a weight of 126,811

Continued on next page
Continued from previous page

Lbs. From pier number 1 to pier number 2 was 101 ft. and weight of 148,498 lbs. That works out to be 1470 lbs. a linear ft. The solution was to install (6-1 in. plates) on all four corners of the two spans of the bridge. The construction project for the repair on the two spans of the bridge was started on December 7th.

The track was out of service and the bridge was in the hands of the construction company to repair. On day two while talking over the project with the contractor on the bridge, “Doug Vanderlee looked up and a skunk was coming right at them across the bridge. Doug clapped his hands and the skunk stopped and looked up, accessed the situation and turned around and walked off the bridge the other way”. I guess trains were not the only user of the bridge across the Arroyo De La Laguna. Later in the day while Doug was standing on the bridge observing the work, an American Bald Eagle flew in and landed on a branch about 35 ft. away. Doug said you were able to get a good look at the eagle and see how beautiful these birds really are. But it is rare to have a bird of prey come in that close to a human. The eagle was looking over the fish situation in the creek. It looks like there weren’t any fish, the eagle didn’t stay long. Getting back to the bridge repair. After lifting the two bridges, the rehab on the footing for the two bridge spans continued without too many problems. The repair to the two bridge spans was coming to a close and better yet, the bridge was level again when you looked at it. Hope it stays that way. Now that the work has been done on the bridge and signed off by the construction company, the bridge will still go through inspections and the work that was done on the bridge will be inspected and signed off by a bridge inspector. The good news, the bridge still is a strong bridge with little damage to it over the years. The bad news, the bridge is open to damage in another earthquake that might hit that area the wrong way. That is the trouble with being on a fault and having historic old bridges on the railroad, they keep getting older and the NCRY must maintain them if we are going to operate on them. Well, I guess we can keep our fingers crossed. With that said, another Tale comes to an end.

Dexter D. Day
See Ken Middlebrooks’ front page article about #2479 and turntable move that has kept our department busy this month. Operating steam annual work also has been a priority to ready the Skookum #7 for the FRA hydro-test which was completed successfully. Meanwhile in our spare time, work has continued around the shop on the SP #1744 frame and furnace bearers. Stockton Locomotive Works has also been busy preparing for more firebox work with the delivery of over 1000 pounds of rigid staybolt stock. Keep reading the Club Car for boiler work updates in the near future.

Alan Siegwarth

Photo by Alan Siegwarth
A stack of rigid staybolts ready for installation.

Photo by Alan Siegwarth
A closeup of the threading work required to make the new stays.
The past month was busy up and down the Niles Canyon Railway, with a lot of good work being done on a number of priority projects. It was rough on our cash, though. While we earned $35,800 during August, we spent $24,900 on SP1744 restoration, $5,500 on paint and upgrades to the Park Car, $3,500 on planning and materials toward getting electricity back to Blake’s, and made our final lease payment of $28,900 to the County for the last fiscal year. We also continued to build track east toward Pleasanton; overhaul and paint the Park Car; and replace more windows in the WP315 coach. Additional Train of Lights decorations were replaced, and fresh inventory has been added to the Gift Shop with the TOL in mind.

Other expenses were consistent for this time of year, so with $112,500 in total expenses we did burn through some cash during August. And just this week we made an emergency expenditure of $45,000 to help the County and the Sunol residents with wildfire control near the Sunol Post Office and the Sunol Garden Park. Still, we have a significant cash cushion, and TOL tickets will go on sale on October 1. If ticket sales go as we expect, we will continue to be in a good place financially.

Revenue from donations for August included $4,100 to the General Fund; $300 to the Steam Dept.; $410 to the Diesel Dept.; $100 to the Car Dept.; and $100 for new facilities. A donation of $35 was given by William Schoenemann in memory of Roger Baird. Thank you all for your support through financial contributions to the PLA and NCRy.

We have applied for a Microbusiness and Nonprofit COVID-19 Relief Grant of $2,500, to be awarded after October 19 through and by various county and state agencies. Requirements suggest this grant will be awarded if your organization has been in operation since 2019, is still in operation, and was impacted by COVID-19 public health restrictions. I think we should easily qualify, as should many firms; I just hope there is enough money to go around.

I have begun collecting information and documents for the annual financial audit of the PLA’s accounting records. They will be turned over to our designated audit firm by the end of September. An audit is a process, and this one will finish in February. The result will be audited financial statements that will reassure our members and potential donors of our consistency and transparency in financial affairs and management.

Let me know if you have questions or comments.
